

# ENABLING A VIRTUOUS CYCLE

## LIFE CYCLE MANAGEMENT IN PHOTOVOLTAICS

---

Andreas Wade  
Global Sustainability Director

# OUTLINE

1. Introduction to First Solar
2. Life Cycle Management in Photovoltaics – IEA & IRENA
3. A Short History of PV Recycling at First Solar
4. Life Cycle Benefits of High Value Recycling

# INTRODUCTION TO FIRST SOLAR

# FIRST SOLAR AT A GLANCE

Over **17GW** sold worldwide and over **\$14.5B** in project financing facilitated

**Partner of choice** for leading utilities and global power buyers since 1999

Solar energy that is **economically competitive with fossil fuel**

Strongest **financial stability & bankability** in the industry

# FIRST SOLAR AT A GLANCE

History of solar innovation with **world record efficiency**

High-efficiency technology with a **proven energy advantage**

**Lowest environmental impacts**  
generating clean electricity with  
NO carbon emissions or air pollutants

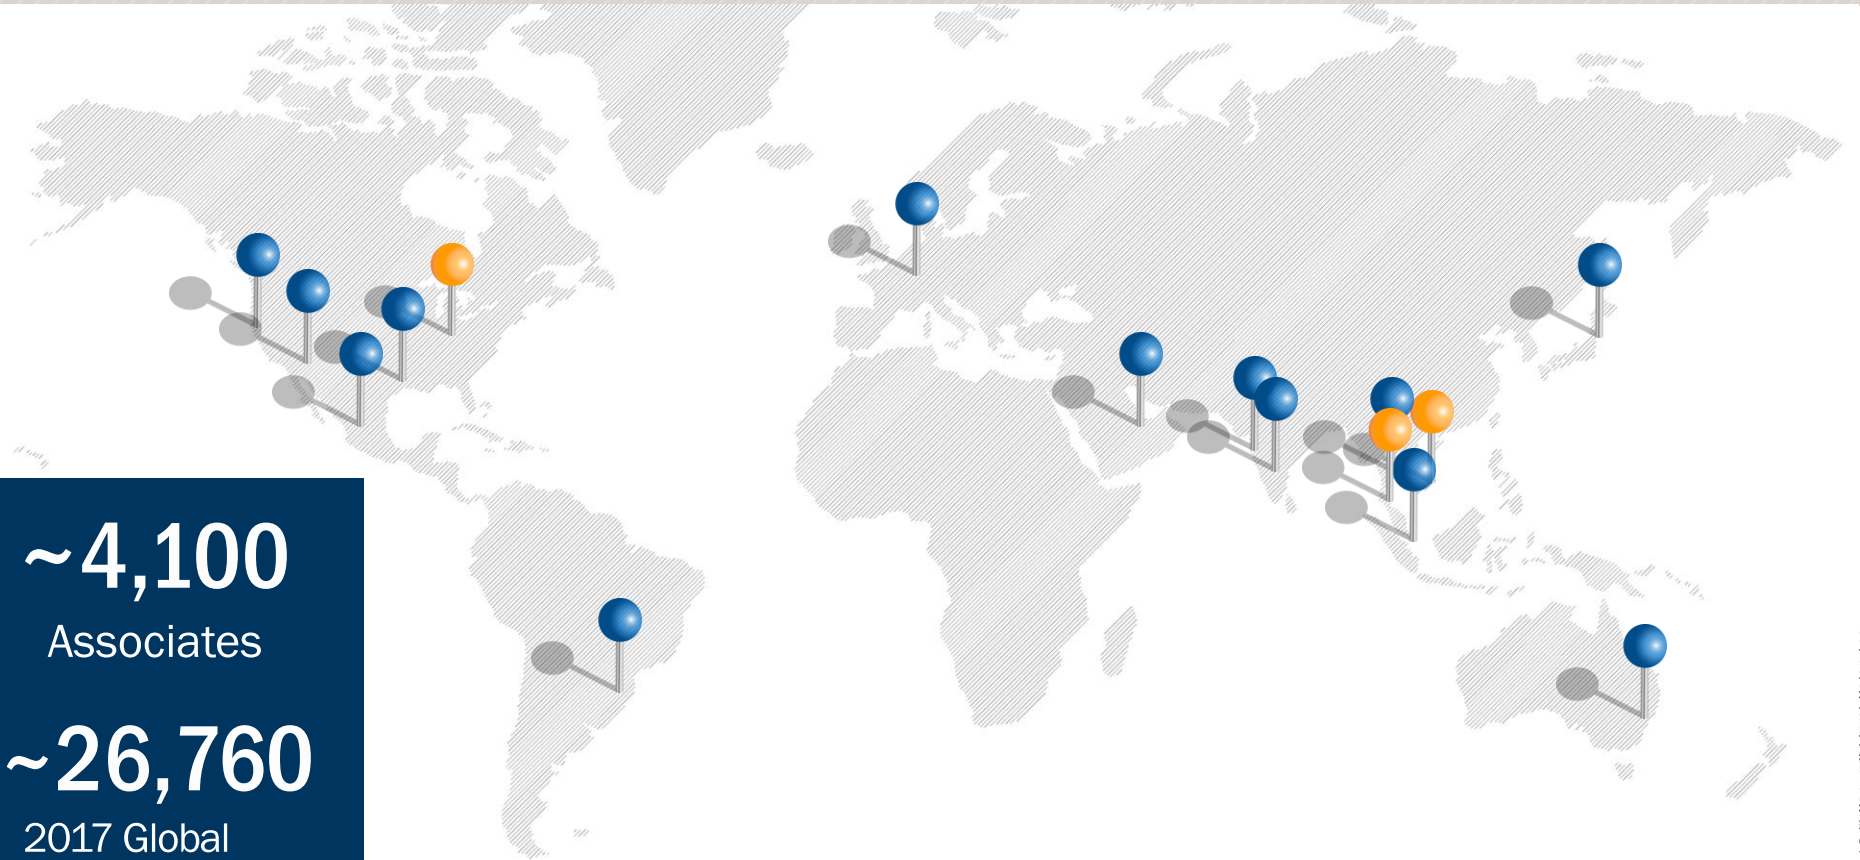

# GLOBAL OFFICES & MANUFACTURING

**~4,100**

Associates

**~26,760**

2017 Global  
Supply Chain Jobs

# TRUSTED AND BANKABLE PARTNER

## CORPORATE RENEWABLES

## UTILITY-SCALE

## DEVELOPERS & EPC

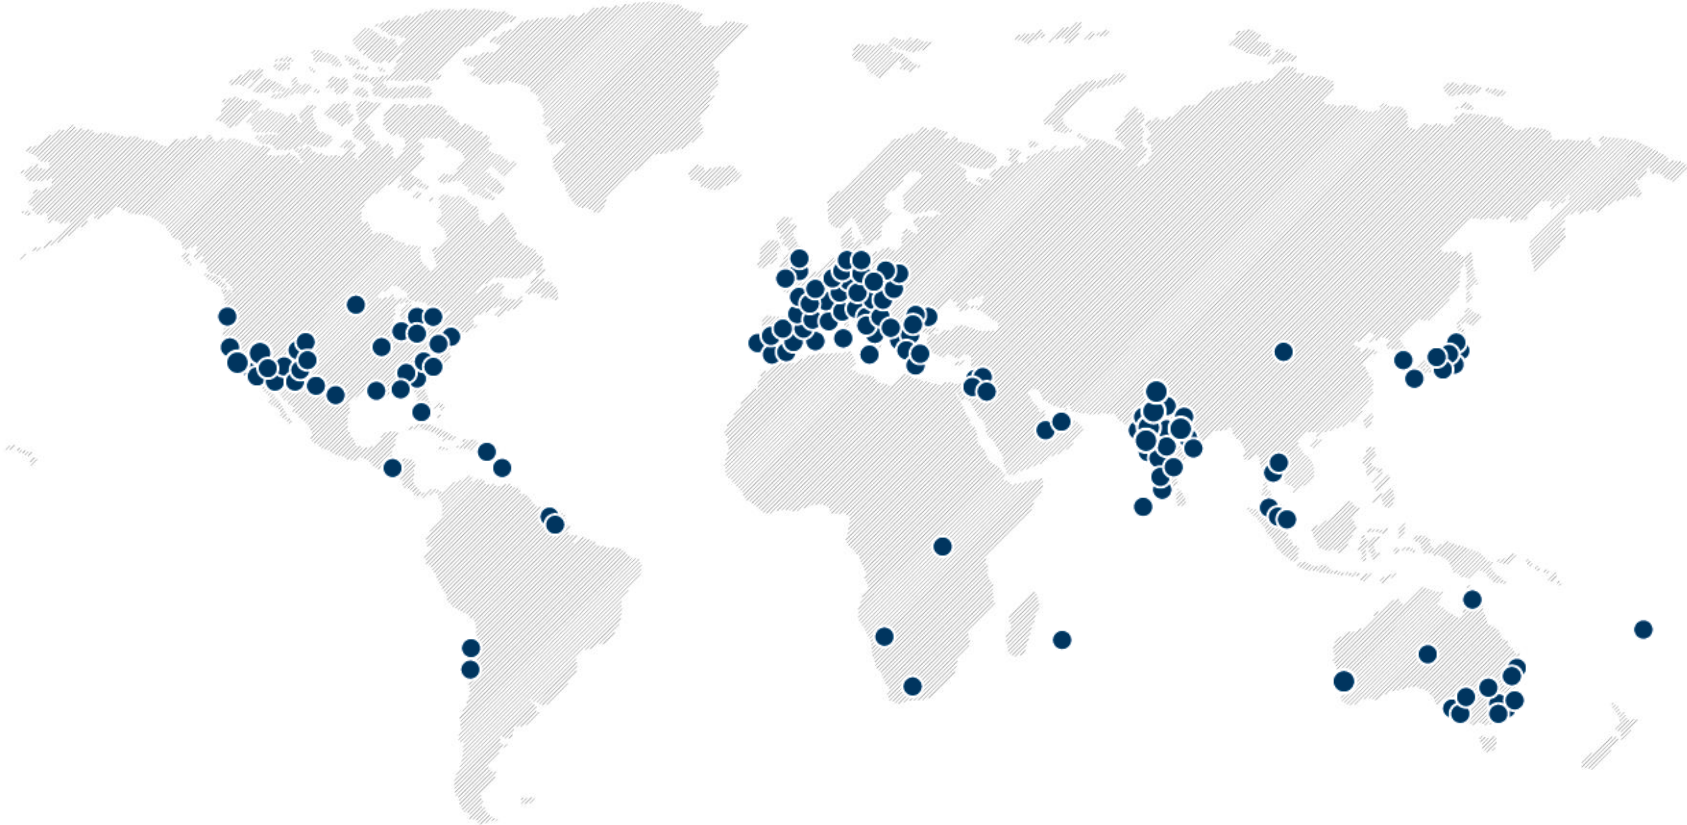

## O&M

“We create **enduring value for our customers** through innovation, customer engagement, industry leadership and operational excellence.”

— Mark Widmar  
First Solar CEO

# 17GW+ SOLD WORLDWIDE

# LIFE CYCLE MANAGEMENT IN PHOTOVOLTAICS – IEA & IRENA

The cover of the report features a photograph of a large solar farm with rows of photovoltaic panels stretching into the distance under a bright sky. A white circular graphic with three arrows forming a clockwise cycle is overlaid on the image. The text "END-OF-LIFE MANAGEMENT" is written in large, bold, black capital letters across the center of the circle, with "Solar Photovoltaic Panels" in smaller black text below it. The date "June 2016" is printed in the bottom right corner of the cover.

# END-OF-LIFE MANAGEMENT

Solar Photovoltaic  
Panels

June 2016

# CHALLENGES AND OPPORTUNITIES

Andreas Wade (IEA-PVPS Task 12), Stephanie Weckend (IRENA), Garvin Heath (IEA-PVPS)

## Contributors

Dr. Karsten Wambach (bifa Umweltinstitut), Tabaré A. Currás (WWF), Knut Sander (ökopol)

IEA-PVPS Task 12: Zhang Jia, Keiichi Komoto, Dr. Parikhit Sinha

IRENA: Henning Wuester, Rabia Ferroukhi, Nicolas Fichaux, Asiyah Al Ali, Deger Saygin, Salvatore Vinci, Nicholas Wagner

# KEY FINDINGS

- ▶ Growing PV panel waste represents a new environmental challenge, but also unprecedented opportunities to create and pursue new economic avenues.
- ▶ This report presents global projections for future PV panel waste volumes to 2050 in two scenarios.
- ▶ Policy action, R&D and supporting analyses are needed to address the challenges ahead; enabling frameworks can be adapted to the needs and circumstances of each region or country.
- ▶ End-of-life management could become a significant component of the PV value chain and can spawn new industries, supporting considerable economic value creation.

# KEY FINDINGS

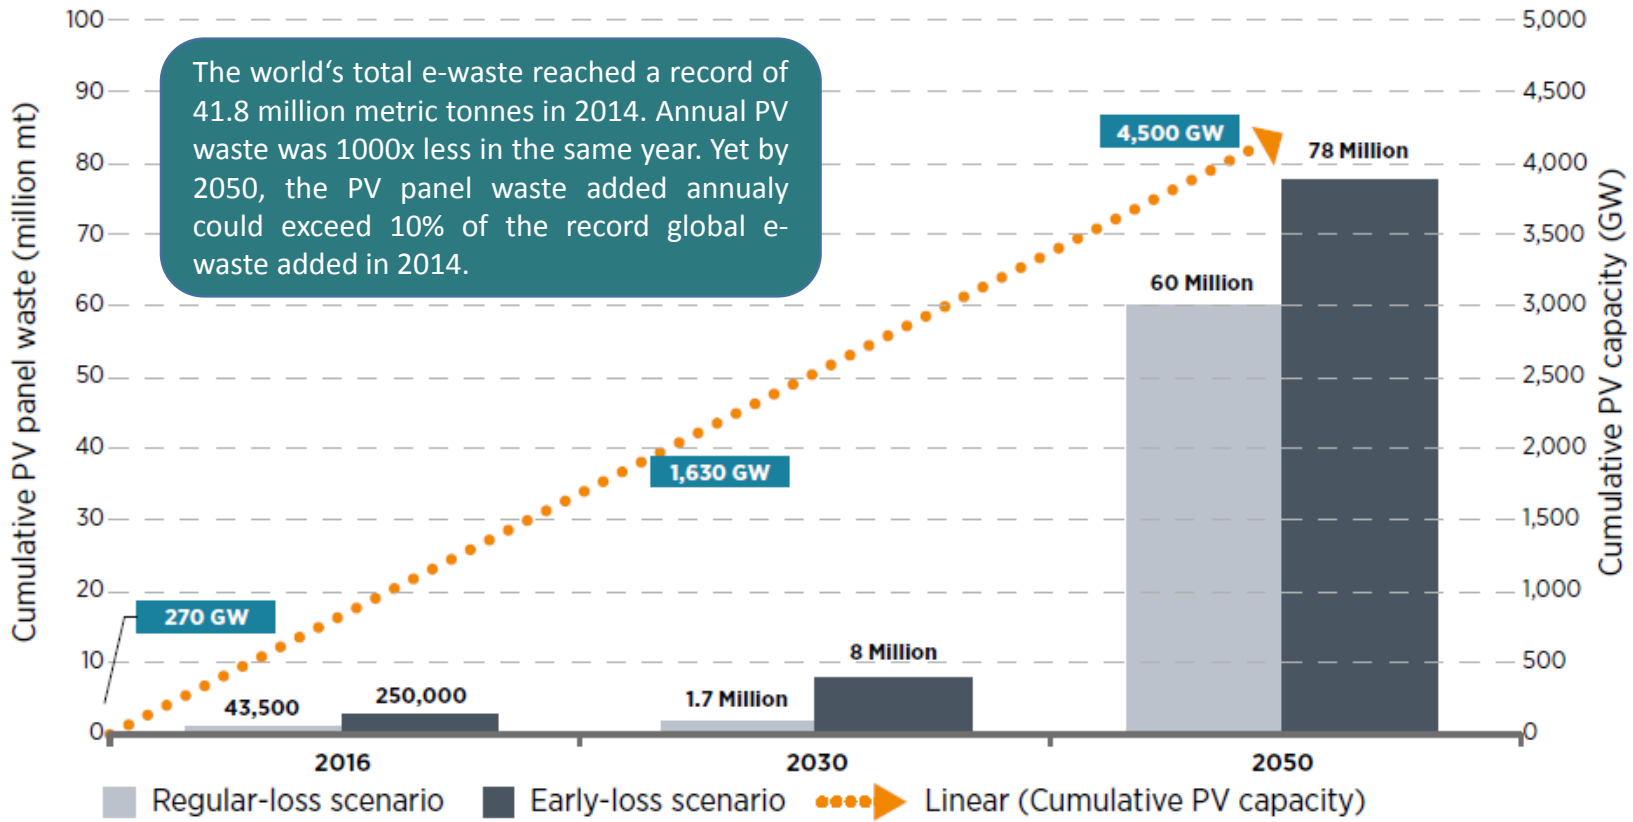

- ▶ Lessons can be learned from the experience of the European Union in developing its regulatory framework to help other countries move up the learning curve faster and adapt locally-appropriate approaches.
- ▶ Considerable technological and operational knowledge about PV panel end-of-life management already exists in many countries. This can guide the development of effective waste management solutions, helping to address the projected large increase in PV panel waste.

# GLOBAL PV PANEL WASTE PROJECTION 2016-2050

The world's total e-waste reached a record of 41.8 million metric tonnes in 2014. Annual PV waste was 1000x less in the same year. Yet by 2050, the PV panel waste added annually could exceed 10% of the record global e-waste added in 2014.

# CUMULATIVE PV WASTE: TOP 5 REGIONS 2050

# POTENTIAL VALUE CREATION

**Cumulative PV capacity:**  
1,600 GW

**2030**

**Life cycle:**  
Enough raw material  
recovered to produce  
**60 million new panels**  
(equivalent to 18 GW)

**Cumulative PV  
panel waste:**  
1.7 - 8 million tonnes

**Cumulative Value Creation:**  
**USD 450 million** alone for  
raw material recovery  
**New Industries  
and employment**

**Cumulative PV capacity:**  
4,500 GW

**2050**

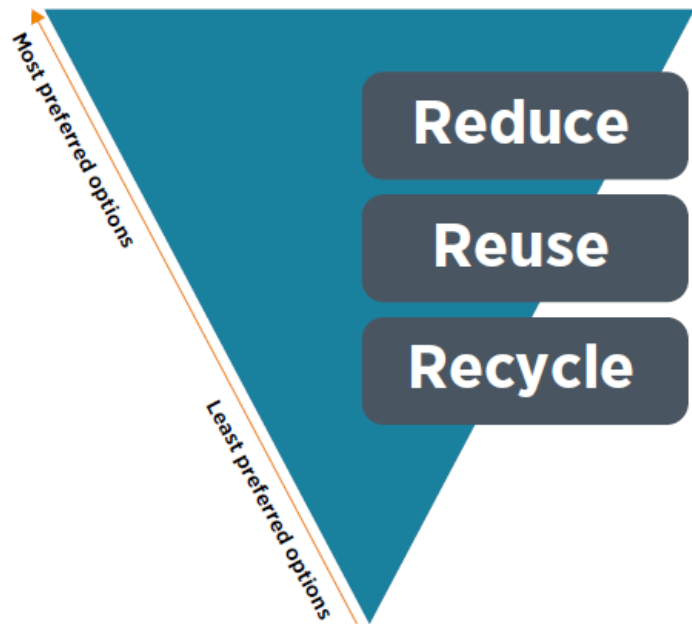

**Life cycle:**  
Enough raw material  
recovered to produce  
**2 billion new panels**  
(equivalent to 630 GW)

**Cumulative PV  
panel waste:**  
60 - 78 million tonnes

**Cumulative Value Creation:**  
**USD 15 billion** alone for  
raw material recovery  
**New Industries  
and employment**

# INNOVATION OPPORTUNITIES

▶ As R&D and technological advances continue with a maturing industry, the composition of PV panels is expected to require less raw materials.

▶ Rapid global PV growth is expected to generate a robust secondary market for panel components and materials.

▶ As current PV installations reach the final decommissioning stage, recycling and material recovery will be preferable to panel disposal.

# PV PANEL COMPOSITION AND WASTE CLASSIFICATION

# PANEL COMPOSITION & TECHNOLOGY TRENDS

## C-Si

## Thin Film

# WASTE CLASSIFICATION

INERT  
WASTE

HAZARDOUS  
WASTE

GENERAL  
WASTE

E-WASTE

INDUSTRIAL  
WASTE

NON-HAZARDOUS WASTE

▶ All PV Panel technologies contain trace amounts of hazardous materials such as lead, tin, zinc, cadmium, selenium, indium, gallium and others.

▶ Depending on the jurisdiction, different waste characterization tests and methods can lead to different classifications of PV panel waste.

▶ Typically, standardized leaching tests and material concentration limits determine the classification and minimum requirements for treatment and disposal.

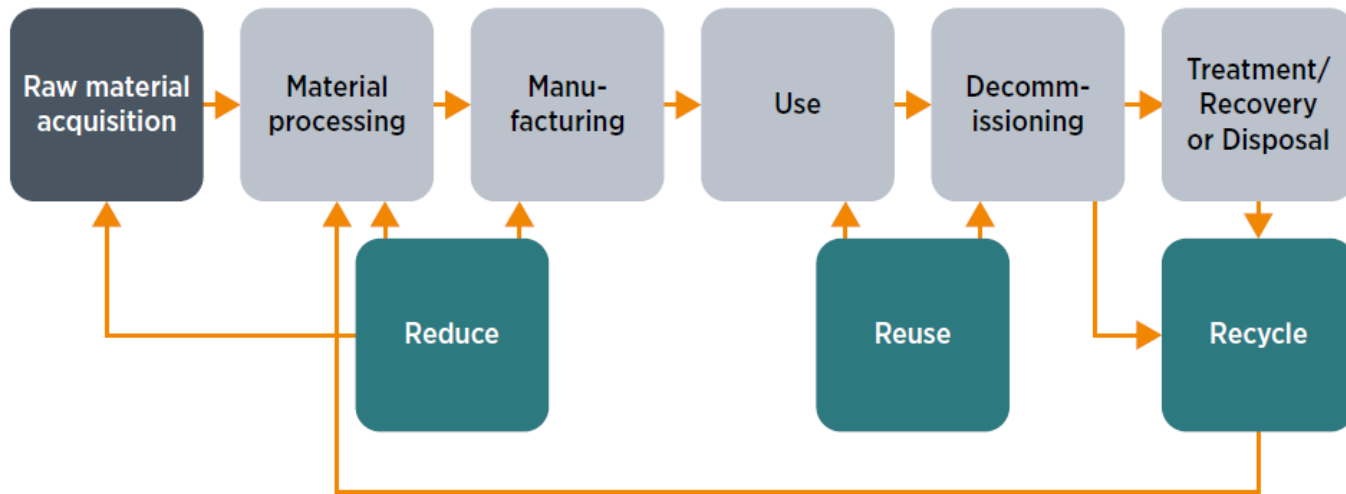

# PV PANEL WASTE MANAGEMENT OPTIONS

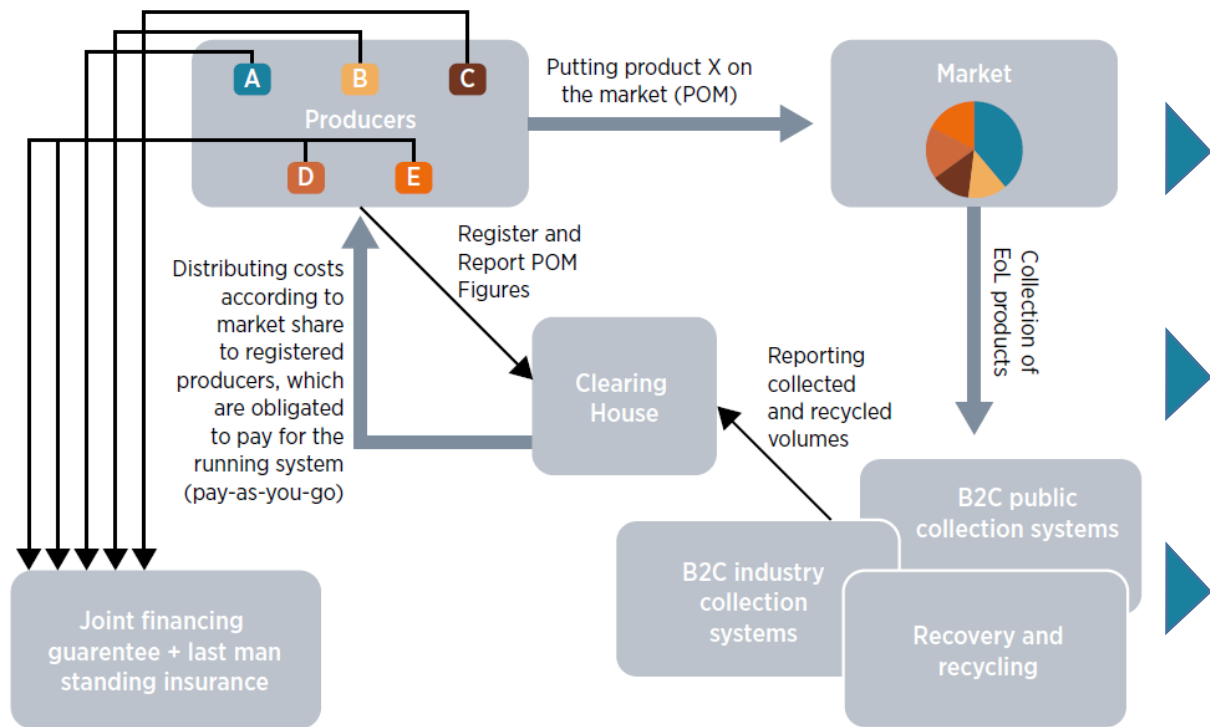

# LIFE CYCLE & STAKEHOLDERS

# MANAGEMENT SYSTEMS

There are a variety of options for end-of-life management structures and financial responsibility: Extended Producer Responsibility, Polluter-Pays-Principle, Public-Private-Partnerships, B2B & B2C solutions. Physical and financial management systems

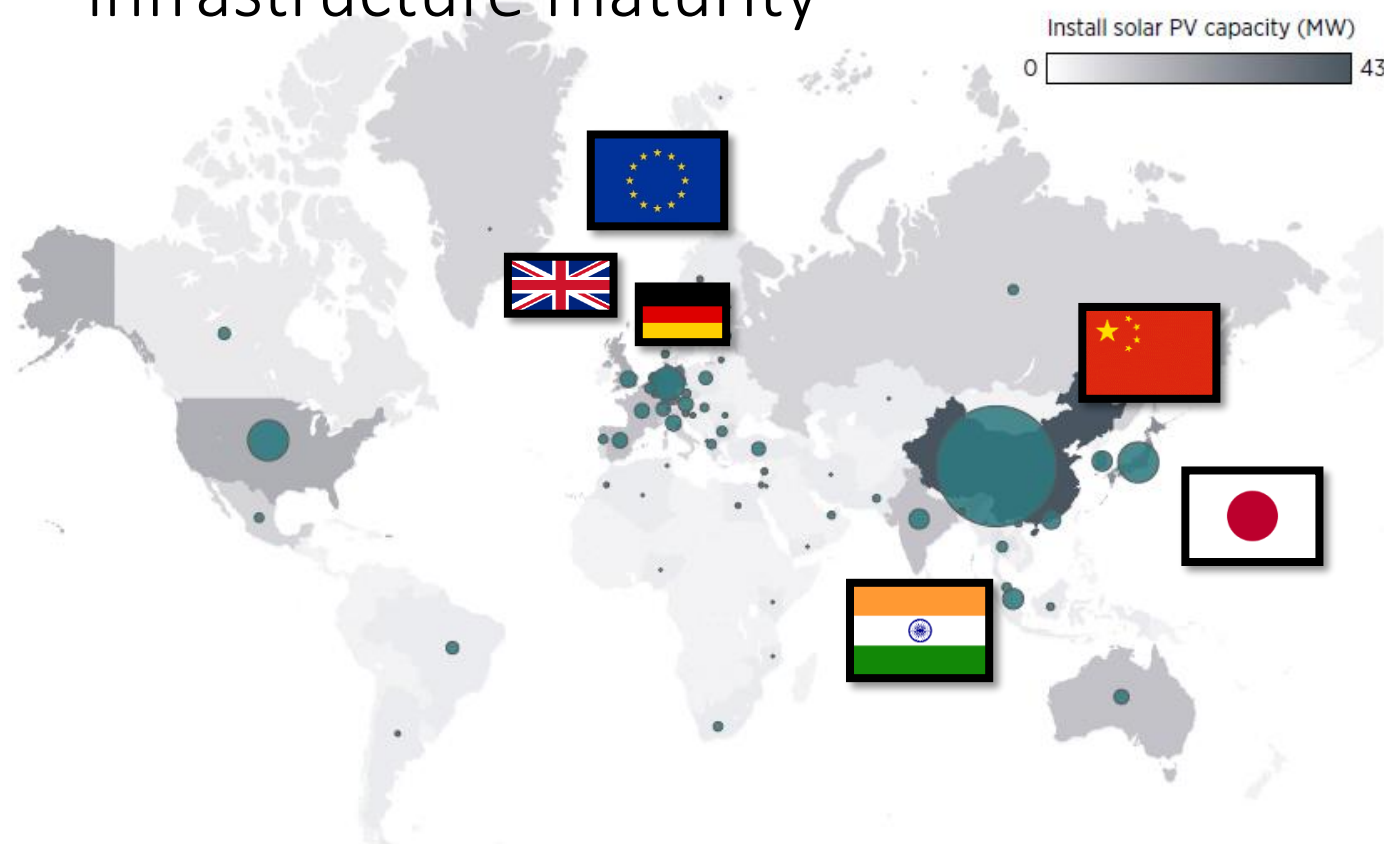

Minimum Requirements & High Value Recycling

# CASE STUDIES

# CASE STUDIES span range of market and recycling infrastructure maturity

# GERMANY – a mature market

Germany will clearly be one of the first and largest markets for PV recycling technologies in coming years.

# JAPAN – advanced market without PV specific waste regulations

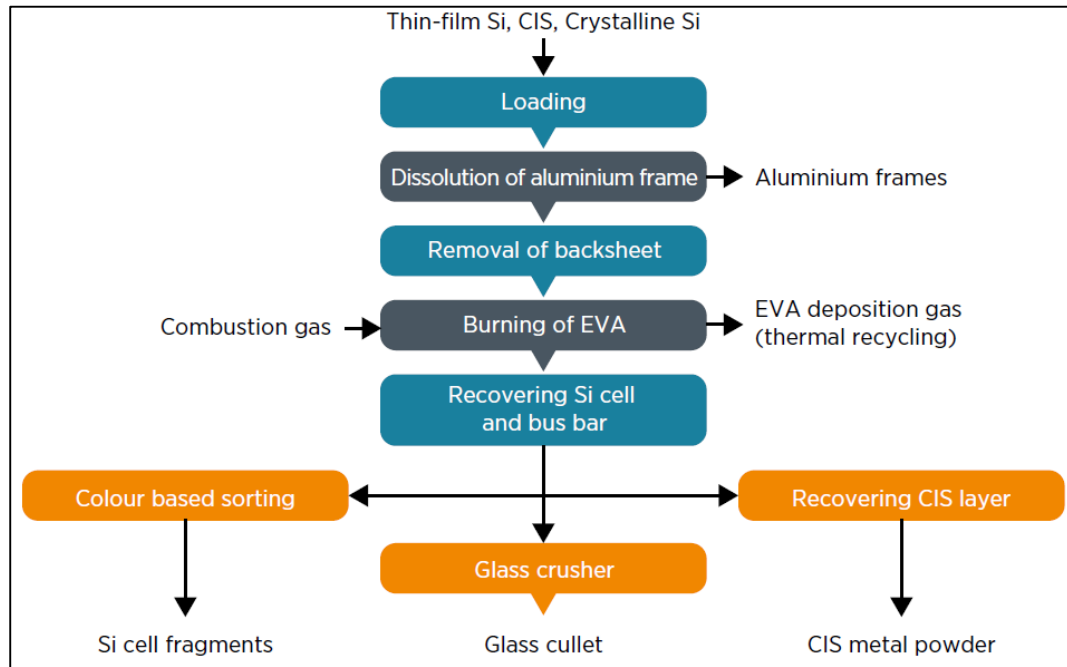

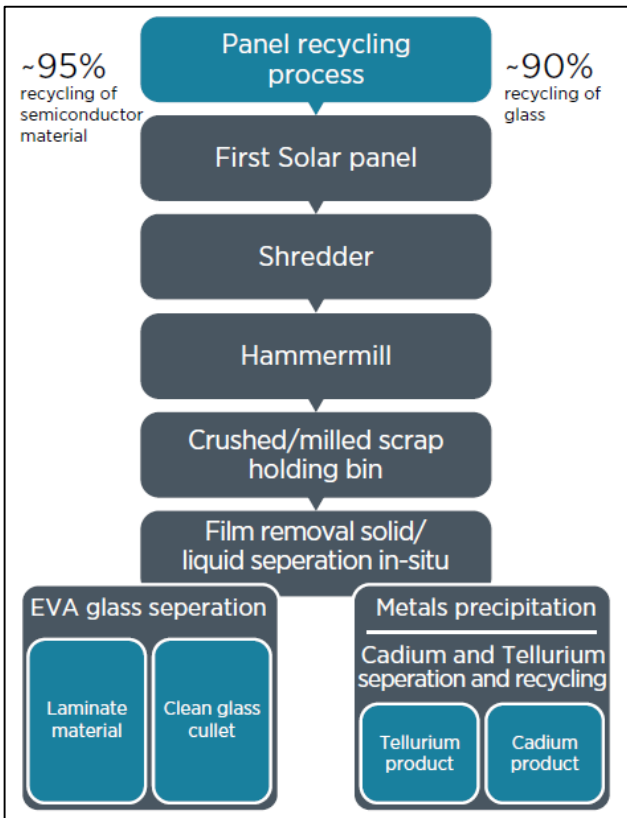

# VALUE CREATION FROM END-OF-LIFE PV PANELS

# RECYCLE – example processes for CdTe and C-Si

Recycling Scheme proposed by NEDO/FAIS in Japan

First Solar provides free of charge collection and environmentally responsible recycling of this solar module. Please do not dispose of this product in any manner before contacting First Solar via:

- the Web: [www.firstsolar.com/recycling](http://www.firstsolar.com/recycling)
- telephone:  
1.866.456.8938 (North American Toll free)  
+800.433.32.333\* (International Freephone)
- \*For more details on dating codes please visit First Solar's website.
- email: [recycling@firstsolar.com](mailto:recycling@firstsolar.com)

First Solar bietet für dieses Solarmodul die Möglichkeit zur kostenlosen Rücknahme und umweltgerechten Wiederverwertung. Bitte kontaktieren Sie First Solar, bevor Sie das Produkt entsorgen.

First Solar ofrece gratuitamente la recogida y el reciclaje responsable de este módulo solar. Por favor, no elimine de cualquier modo los residuos de este producto antes de ponerse en contacto con First Solar.

La First Solar raccoglie gratuitamente questo modulo solare e lo ricicla nel rispetto dell'ambiente. Non getti via questo prodotto prima di aver contattato la First Solar.

First Solar assure gratuitement la collecte et le recyclage de ce module solaire de manière écologique et responsable. Merci de ne pas vous débarrasser de ce produit de quelque façon que ce soit avant d'avoir contacté First Solar.

First Solar παρέχει δωρεάν συλλογή και περιβαλλοντολογικά υπεύθυνα ανακύκλωση της παρούσης ηλιακής πλάκας. Αποφύγετε την απόρριψη του προϊόντος με οποιαδήποτε τρόπο χωρίς επικοινωνία με τη First Solar.

STUDY ON  
THE DEVELOPMENT OF  
A TAKE BACK AND  
RECOVERY SYSTEM FOR  
PHOTOVOLTAIC PRODUCTS

FUNDED BY BMU  
GRANT NUMBER 0338P002

CO-FINANCED BY EPIA / BSW-SOLAR

November 2007

DIRECTIVE 2012/19/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL  
of 4 July 2012  
on waste electrical and electronic equipment (WEEE)  
(recast)  
(Text with EEA relevance)

Enabling a **level playing field** for the collection, treatment and recycling of photovoltaic panels in the EU has accelerated the learning curve for the industry. To ensure further progress and enable a sustainable recycling and recovery value chain, a **viable secondary resource market outlet** is of paramount importance.

# FULLY INTEGRATED RESPONSIBLE PRODUCT LIFE CYCLE APPROACH

## Material Sourcing

Converting mining byproducts into a stable semiconductor

## Product Design

Designed for high-value recycling

## Manufacturing

Manufacturing with less energy, water, and GHG emissions

## Product Use

Faster CO<sub>2</sub> reductions and greater return on energy invested

## Collection & Recycling

Recovering over 90% of materials at end-of-life for new PV modules

# WHY DOES HIGH-VALUE PV RECYCLING MATTER?

## Crucial to managing large future PV waste volumes

- Over 300 GW PV installed worldwide

## Recycling is important for all PV technologies

- Environmentally sensitive materials are common in the industry (Pb, Cd, In, Se, Ag...)

## Provides socio-economic and environmental benefits

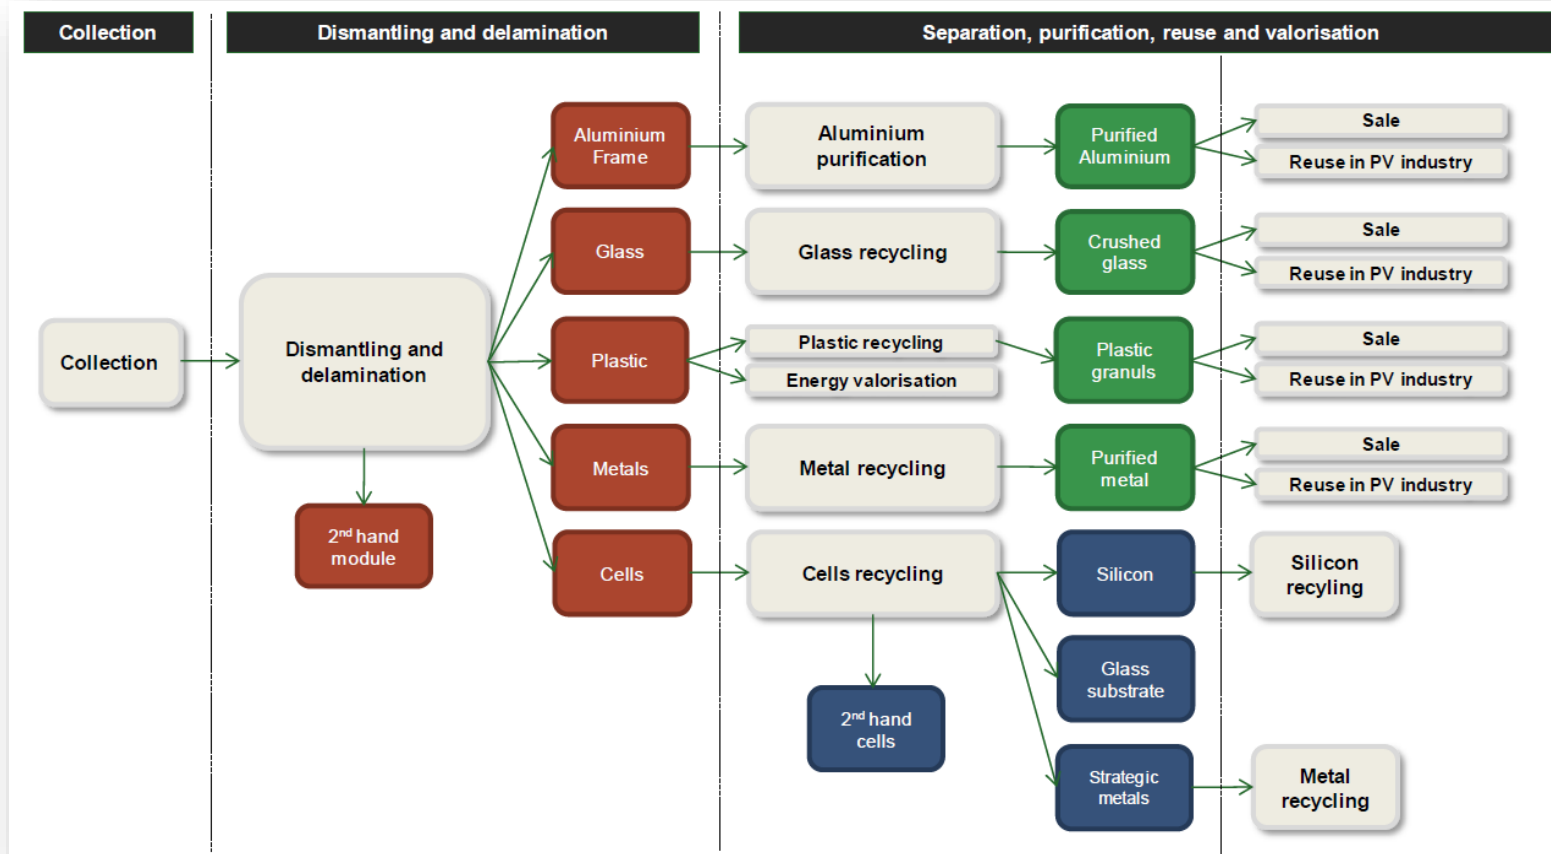

- Minimizes life cycle impacts
- Reclaims valuable and energy intensive materials
- Creates jobs and economic benefits
- Recoverable value could exceed \$15bn by 2050

Recycling **maximizes resource recovery and increases the sustainability of PV.**

FIRSTSOLAR.COM/SUSTAINABILITY

# FIRST SOLAR'S RECYCLING PROCESS DESIGN PROGRESSION

## V1 Recycling (2006)

- Based on the mining industry
- Batch process
- Moving glass and liquid from process to process
- Volume output – 10 tons/day
- Capital investment - \$5M

## V2 Recycling (2011)

- Based on the chemical industry
- Batch process
- Based on keeping the glass fixed and moving the liquids thru the material
- Volume output – 30 tons/day
- Capital investment - \$7M

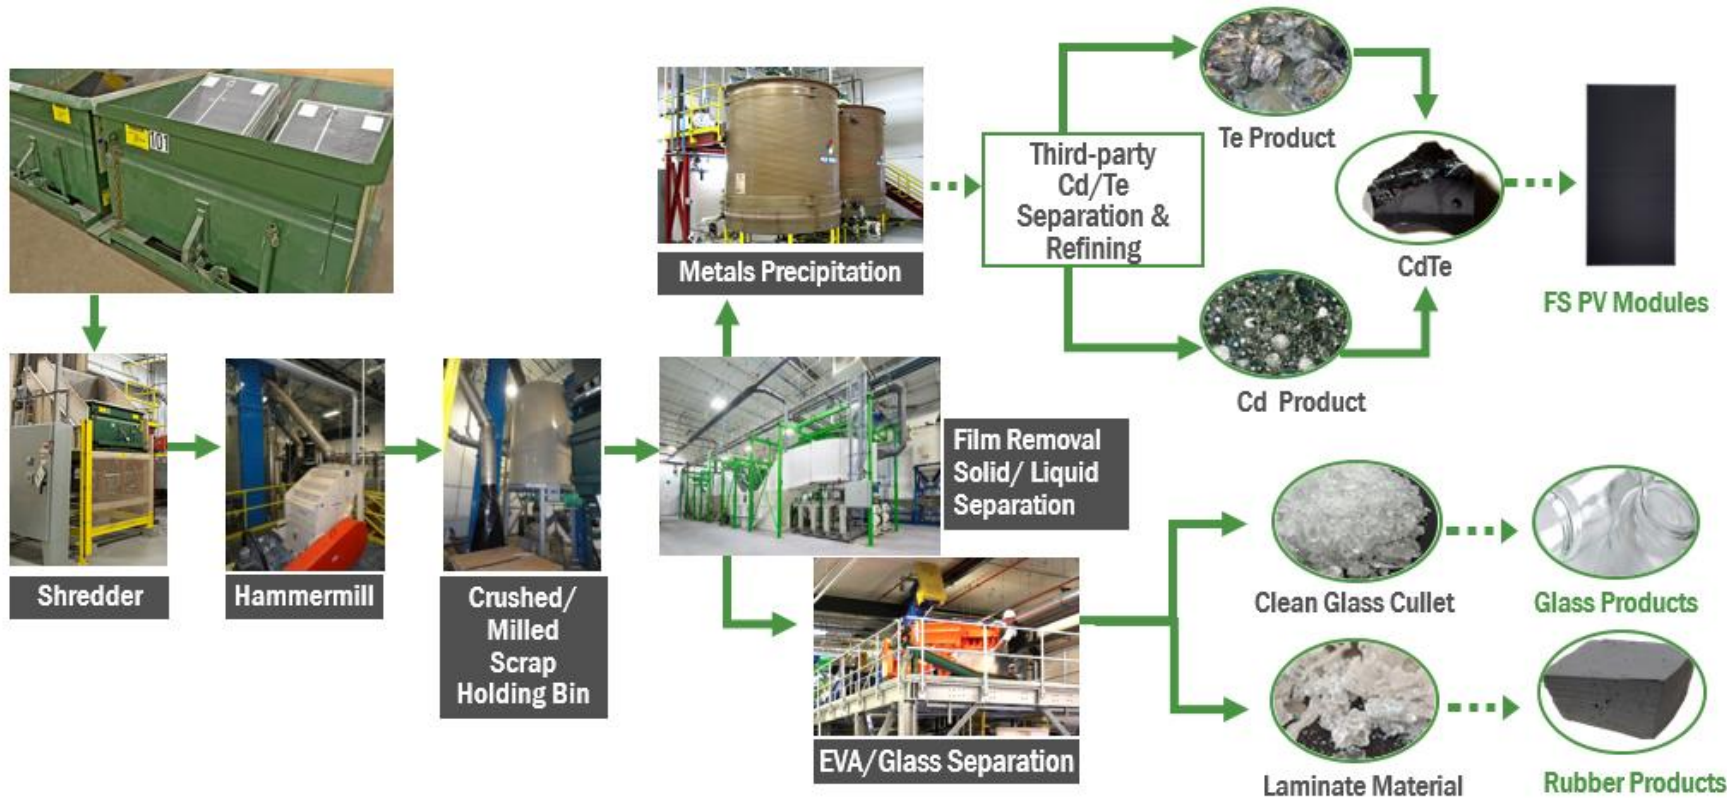

# THIRD GENERATION CONTINUOUS PROCESS RECYCLING (2015)

- More efficient 7/24 operations
- Compact plant with smaller footprint
- Increased daily recycling capacity from 30 tons to 150 tons/day capacity
- Requires 30% less capital, chemicals, waste and labor
- Achieves superior glass and semiconductor purity

# FIRST SOLAR MODULE RECYCLING PROCESS

+ 90% Recycling of Semiconductor Material and ~ 90% Recycling of Glass

# GLOBAL AND PROVEN INDUSTRY-LEADING RECYCLING EXPERTISE

- 1<sup>st</sup> global PV module recycling program in the industry
- Recycling facilities are operational in the USA, Germany and Malaysia
- Scalable to accommodate future high volumes: ~165,000MT recycled (end of '16)
- Recovering over 90% of semiconductor materials and approximately 90% of glass
- Continuously improving processes and technology and reducing operational costs

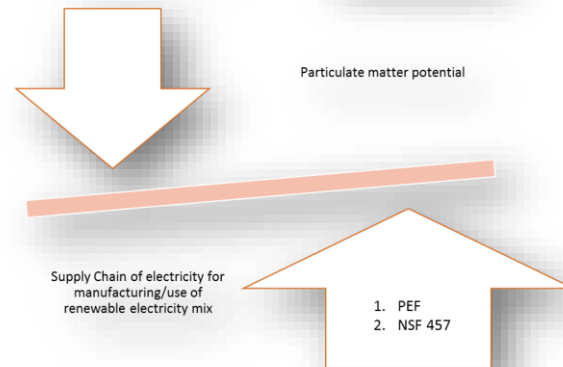

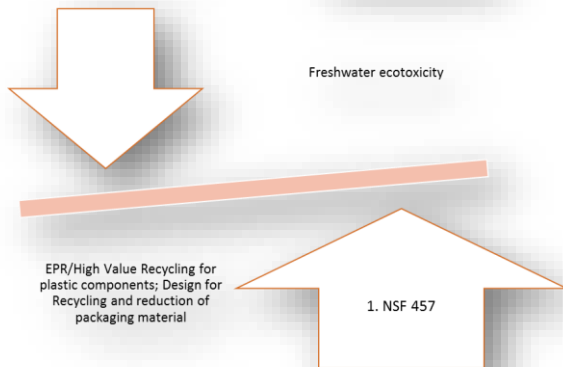

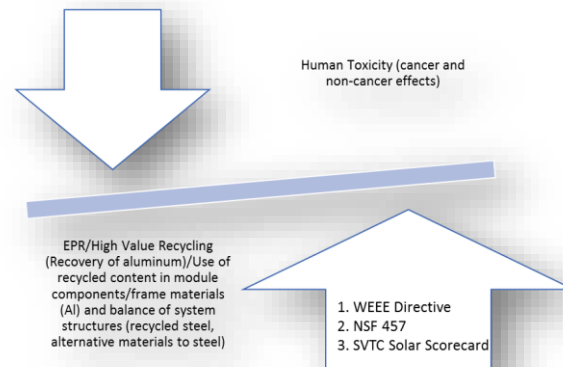

# LIFE CYCLE BENEFITS OF HIGH VALUE RECYCLING

# BENEFITS OF HIGH VALUE RECYCLING

Measures that enable and encourage circular economy and the decarbonization of the supply chain of electricity would help to effectively relieve some of the major hotspots by addressing resource depletion (through recycled content) and reducing emissions from fossil-fuel based electricity generation.
